

EDS FingerID System

WALL MOUNTED MODEL

Key Features, Product Highlights and Benefits

Eliminate headaches caused by missing time logs:

- ✓ High Sensitivity Scanner – soft touch only
- ✓ 360 degree finger rotation capability
- ✓ Visual and Audio time log confirmation
- ✓ PIN only mode for employees with defective fingerprints
- ✓ On-screen transaction attendance history for the day.
- ✓ Full Name display (not just employee number)

Beyond mere attendance capture ... with **MANAGEMENT SUPPORT*** features!

1. **PERSONAL MESSAGE DISPLAY** – A manager may send a personal message a specific employee. This message automatically appears when the targeted employee logs IN or OUT of the system
2. **EMPLOYEE LOG-IN DISPLAY** – A convenience feature for managers and bosses- the system displays a list of all employees currently logged into the system. Includes the exact time when they logged IN. No more asking around to get information if a specific employee arrived or not.
3. **TIMEDATA HISTORY INQUIRY** – Self-service timedata history inquiry. Employees may inquire about their timedata history – minimizing need to approach HR personnel.
4. **MARQUEE ANNOUNCEMENT** – The system displays a moving message at the bottom of the screen that can announce anything management wants. This message is uploaded remotely using our software.
5. **MULTI-FORMAT OUTPUT CAPABILITY** -- Facility to output data in either a text file, password-protected MS Access database, HTML, and other formats.
6. **FULL TECHNICAL SUPPORT** – Our package includes training and orientation of selected personnel as well as setup and installation of the system. We will advise you of good deployment strategies for your company as well as monitor its progress. We will “walk” you all the way to a successful deployment.

* Must see to appreciate. Request for a product demonstration in your office.

OTHER UNIQUE FEATURES:

- * **Industrial Strength Database** – Data resides in the highest database version – Microsoft SQL Server. Virtually incorruptible with unlimited capacity. The capacity is based on the size of your PC’s hard disk.
- * **Speech synthesis** – The system will verbally greet the employee and pronounce his name when logging IN or OUT. The greeting may also be customized depending on the needs. This feature enhances the user friendliness of the system making it more acceptable to the employees.
- * **Allows 360 degrees Fingerprint Rotation** – This is an important feature because without it employees would have a difficult time having their fingerprint recognized. The system can recognize diagonally placed or even upside-down fingerprints placed on the scanner.
- * **Fingerprint Recognition Administrator Access** – No need to remember passwords because the system requires fingerprint recognition of authorized administrators in order to enter restricted areas such as Fingerprint Enrollment and Timedata Editing.

COMPARE:

Stand-alone Biometrics	vs.	EDS FingerID™ System
Fingerprint Enrollment		Fingerprint Enrollment
